Waveteq Earns Industry Canada Certification

Waveteq Communications Inc. a British Columbia, Canada based, manufacturer and designer of ruggedized multifunctional WiFi devices and developer of superior WiMax devices, announces the completion of the Certification Process for Industry Canada and the Federal Communications Commission (FCC) in the United States.

“We are very pleased with the modular certification we received from Industry Canada and the FCC for our Shadow product line. This is an important milestone for Waveteq. It provides us a powerful tool to move forward. We now have the flexibility to adapt our products to the competitive requirements of our customers for the foreseeable future.” said Waveteq CEO, Jack Van der Star.

Waveteq’s Shadow series of rugged multi-functional wireless products address a number of application scenarios including point-to-point, link and cover and network redundancy. With advanced on board routing, bridging, VLAN and security features a network operator can now easily build and manage the solid wireless broadband networks required today to deliver high quality wireless connectivity.

About Waveteq Communications:

Waveteq Communications Inc, a privately held British Columbia Canada Corporation, builds and designs robust, multifunctional WiFi radios for rural and underserved markets world wide. Waveteq is also a developer of superior WiMax devices. Our users include ISP’s, major system integrators, public safety, municipal and industrial operations in Africa, South America, the United States and Canada.
